

Q1:

Q2: What is Computer Network?

Computer networking as we know it today may be said to have gotten its start with the Arpanet development in the late 1960s and early 1970s.

The Advanced Research Projects Agency Network (ARPANET) was the world's first operational packet switching network, the first network to implement TCP/IP and progenitor of what was to become the global internet.

In 1960s, the University of California at Los Angeles, the University of California and the University of Utah were connected as the beginning of the ARPANET (Advanced Research Projects Agency Network) using 50 Kbits circuits.
